**SUBJECT: 6 Bolt S.S. Manifold - 3CP and 5CP**

The manifold design of the 3CP and 5CP pumps has changed from a 4-bolt design to a 6-bolt design offering added strength and performance life in harsh applications.

The numbering of the pumps has changed to assure the correct manifold part numbers are used when servicing the new 6-bolt style. Do not mix old and new individual manifolds. However, complete heads 816719 (3CP) and 816720 (5CP) can also be used on both old and new pump models. All internal seal and valve parts and kits remain common between the old and new models.

<b>Pump Old Model</b>	<b>Inlet Manifold Old P/N</b>	<b>Discharge Manifold Old P/N</b>	<b>Pump New Model</b>	<b>Inlet Manifold New P/N</b>	<b>Discharge Manifold New P/N</b>
